

INDUCOAT®

Leader in surface hygiene

qPCR Mould Test

Test your chosen area with our sample swab

We analyse your sample for harmful mould and bacteria

You receive a report and remediation advice

Track & Trace the health of your care environment

Created in partnership between engineers and microbiologists from the University of Southern Denmark and Inducoat B.V, our qPCR mould tests are able to identify not only the amount of mould on a tested surface but its origin and species and give at an A to F severity rating.

Using state-of-the-art testing technology, we're able to fully chart the growth and propagation of mould particles and use that knowledge to develop highly effective and targeted remediation solutions.

This allows healthcare organisations to not only test, assess and combat developing and growing mould infestations on their premises but to also monitor and adjust ongoing remediation efforts.

Offering immediate long term protection & prevention

As the spotlight on living standards in UK carehomes grows, an effective and long term solution is increasingly called upon.

Carehomes and residences are becoming more vulnerable to mould and damp and the pressure is on to protect the health and wellbeing of residents and staff.

Our line of anti-mould and anti-fungi paint and cleaning solutions not only guarantees to eradicate mould and fungal growth - but will keep it away for at least 5 years.

Proven in over 100,000 Dutch homes, we have a track record of 100% safety and efficacy coupled with regular testing and tracking, we guarantee your homes remain mould and fungi free.

- Water-based and suitable for indoors and outdoors
- Available in all desired RAL colours
- In 1, 2.5, 5 and 10 Litres
